

Bitcoin ETF continues to rise, DOT miners earn up to \$19,800 a day from cloud mining

June 19, 2025 - As Bitcoin and Ethereum ETFs continue to attract strong institutional capital inflows, long-term confidence in the global digital asset market is steadily increasing. On June 19 alone, Bitcoin ETFs recorded net inflows for the eighth consecutive day, with new funds reaching \$390 million, of which BlackRock and Fidelity led the capital absorption, and Ethereum ETFs also recorded a net inflow of \$19.1 million for the third consecutive day. The growing capital inflow is driving Bitcoin to gradually establish a core position in the global asset allocation system.
